GROWING BETTER EVERY DAY

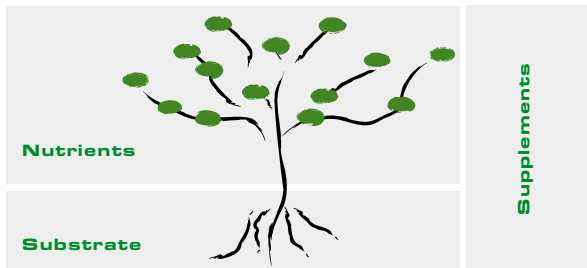

**COCO GROWING**

## COCO GROWING

**A high yield yet sustainable cultivation?  
Then Coco Growing is for you.**

The high yield is a result of the natural richness of coconut; it contains substances that stimulate the growth of your plants. Furthermore, coconut has a very high buffer capacity and allows for excellent regulation of the pH. Coco Growing is especially suited to experienced growers.

Cellmax has two other cultivation systems aside from Coco Growing, namely Bio Growing and Hydro Growing. Ask your supplier about the possibilities.

**Substrate** this is the subsoil you use for the cultivation. There are two groups: organic (soil) or hydrologic (coconut, mineral wool, etc.).

**Nutrients** nutrients ensure that your plants can grow. Without nutrients there is no yield.

**Applications** you can give your plants an extra boost and protect them from diseases and parasites by choosing from the supplements.

## Substrate

### Cellmax Coco Pro

Purely natural subsoil, made from coconut bark: Cellmax Coco Pro. You can re-use the substrate multiple times, saving you a lot of work because you do not need to re-fill the pots every time. Note: when re-using the substrate always apply Cellmax Super Enzyme!

## Nutrients

### Cellmax CocoGrow / CocoBloom

#### Cellmax Coco Grow

Give your plants everything they need to become healthy and strong with Coco Grow. It contains an abundance of nutrients and extra nitrogen for a healthy green colour.

#### Cellmax Coco Bloom

Coco Bloom accelerates fruit development; the product is full of vitamins, minerals and an extra dose of phosphor.

## Supplements

### Cellmax Root Booster

Roots are important: they ensure that your plant absorbs water and nutrients. The amino acids in Cellmax Root Booster guarantee swift growth of the roots in the initial phase. The trace elements and vitamins keep the roots healthy and strong. Root Booster also offers protection against diseases affecting the roots.

### Cellmax Super Enzym

Dead roots are bad for your plants, as they restrict the absorption of nutrients. Super Enzyme, a product with more than 20 enzymes and vitamins, ensures that dead roots and other organic materials are converted to sugars and minerals that boost the growth of your plants. The capacity of the root system is increased, resulting in a bigger harvest.

## Supplements

### Cellmax PH +/-

Regulation of the pH, to ensure your plants extract everything from the costly food?

Cellmax makes it easy for you. pH- Growth, pH- Flowering and pH+ ensure an optimal pH, from beginning to end.

### Cellmax Leafspray

A plant not only absorbs nutrients through the roots, but also through the leaves.

Capitalise on this opportunity with Leaf Spray, a supplementation to the basic food that contains trace elements and vitamins.

Your plant grows strong, evenly and acquires a high resistance to fungi, viruses and other plagues.

## Supplements

### Cellmax PK Booster

Boost the fruit development of your plants with PK Booster: extra doses phosphor and potassium guarantee a higher yield.

### Cellmax Flower Stimulator

Would you like a lovely sweet taste and be surprised by the yield?  
Use Cellmax Flower Stimulator! This natural food supplement improves the absorption of nutrients, so that your plant becomes healthy and strong. Flower Stimulator increases the effectiveness of the photosynthesis, as a result of which your plant bears more fruit. The result: a higher yield.

## CELLMAX GROWING BETTER EVERY DAY

Cellmax has a simple basic assumption: what is good, can be better. That is why we are always looking for ways to optimise our products. However, we do more than simply deliver good food and supplements: we also give growers tips and advice. Our Growers Guide (see below) is the reference guide for beginner and advanced growers.

### THE GROWERS GUIDE

Cultivation is an area of expertise. There are many factors that influence the yield. All the questions from beginner and professional growers are answered in The Growers Guide, the handy guide produced by Cellmax. Request the guide from your supplier, or download the PDF from [cellmax.nl](http://cellmax.nl)!
